OR 第二周上机作业

20123101 李昀哲 2022.12.10

1、给出 LP 问题基本可行解及其对应的基矩阵

准备部分:

```
% Operational Research
% @author 李的哲 20123101
% Dec 14, 2022
% 给出LP问题基本可行解及其对应的基
A=[2,1,1,0,0;
   1,1,0,1,0;
   0,1,0,0,1;];
b=[10,8,7]';
```

BFS 函数:

会用到的各种变量

```
function [xs,Bs,x_num]=BFS(A,b)
 %存储基本可行解,可行基矩阵,基本可行解个数
 xs = [];Bs = {};x_num = 0;
 % 一些用到的临时变量
 temp = [];
 inv_temp = [];
 cnt = 1;
 [row,col] = size(A);
 m = rank(A);
计算:
% 二项式公式,选出所有组合
all_num = nchoosek(col,row);
all_col = nchoosek(1:col,m);
if m < row
    error('无法求解');
    for i = 1:all_num
        temp = A(:,all_col(i,:));
       if rank(temp) == m
  inv_temp = inv(temp)*b;
  if inv_temp >= 0
               for j=1:col
                  xs(cnt,j) = 0;
               end
               xs(cnt,all_col(i,:)) = inv_temp;
               Bs{1,cnt} = temp;
               cnt = cnt+1;
           end
       end
x_num = cnt-1;
end
```

函数调用:

```
[xs,Bs,x_num]=BFS(A,b)
```

运行结果:

XS =

1	7	1	0	0
2 5 0	6	0	0	1 7 0 7
5	0	0	0 3	7
0	7	3	1	0
0	0	10	8	7

Bs =

1×5 <u>cell</u> 数组

 $\{3\times3\ double\}$ $\{3\times3\ double\}$ $\{3\times3\ double\}$ $\{3\times3\ double\}$

x_num =

5
